

### Prevalence Pie Charts for Differe States Carles Vilalta DVM, PhD

**Key Points:**

- Tableau gives us the ability to show the data in different ways easily.

-----

This week we want to show you another of the new charts that you can create with Tableau, a program that helps to dissect and visualize the data. In this case the chart is a prevalence pie by state and month. The program allows you to browse through different months and years and see how the prevalence of the different states changes over time.

We look forward to seeing you at the Lemman Conference and hearing any / all suggestions on to make the SHMP program better. Thank you. Carles. [CVilalta@UMN.Edu](mailto:CVilalta@UMN.Edu)
