

## Time Between Breaks by Status

Carles Vilalta DVM, PhD

### Key Points:

- Tableau gives us the ability to break and show the data in different ways easily.

This week we want to show you another chart coming from the SHMP data. In this case we show you the number of days between PRRS breaks. As expected the interval between outbreaks of farms that are at status 1 at the second break is lower than those that achieved status 4. Another observation is that the biggest numbers of breaks were in farms that were status 2fvi or 2vx.

We hope that you enjoyed the different talks and presentations in the Leman conference.
